

*Challenges and policy implications
in developing a
National Crime Classification system*

Paul Wormeli,

Executive Director Emeritus, IJIS Institute

Government Agencies engaged in public safety and the administration of justice in the U.S.

Federal	Federal Law Enforcement	Attorney General	U.S. Courts	Bureau of Prisons	
State	State Police/ Highway Patrol	Attorney General	Supreme Court	Prison	Parole
County	Sheriff/ Police	District Attorney	Superior Court	Jail	Probation
City	Police	Municipal Court	City Attorney	Fire	EMS

National Organizations

- IACP—International Association of Chiefs of Police
- NCJA—National Criminal Justice Association
- NCSC—National Center for State Courts
- APPA—American Parole and Probation Association
- NDAA—National District Attorney's Association
- NACO—National Association of Counties
- NLC—National League of Cities
- NGA—National Governor's Association
- NCSL—National Conference of State Legislators

National Information Sharing

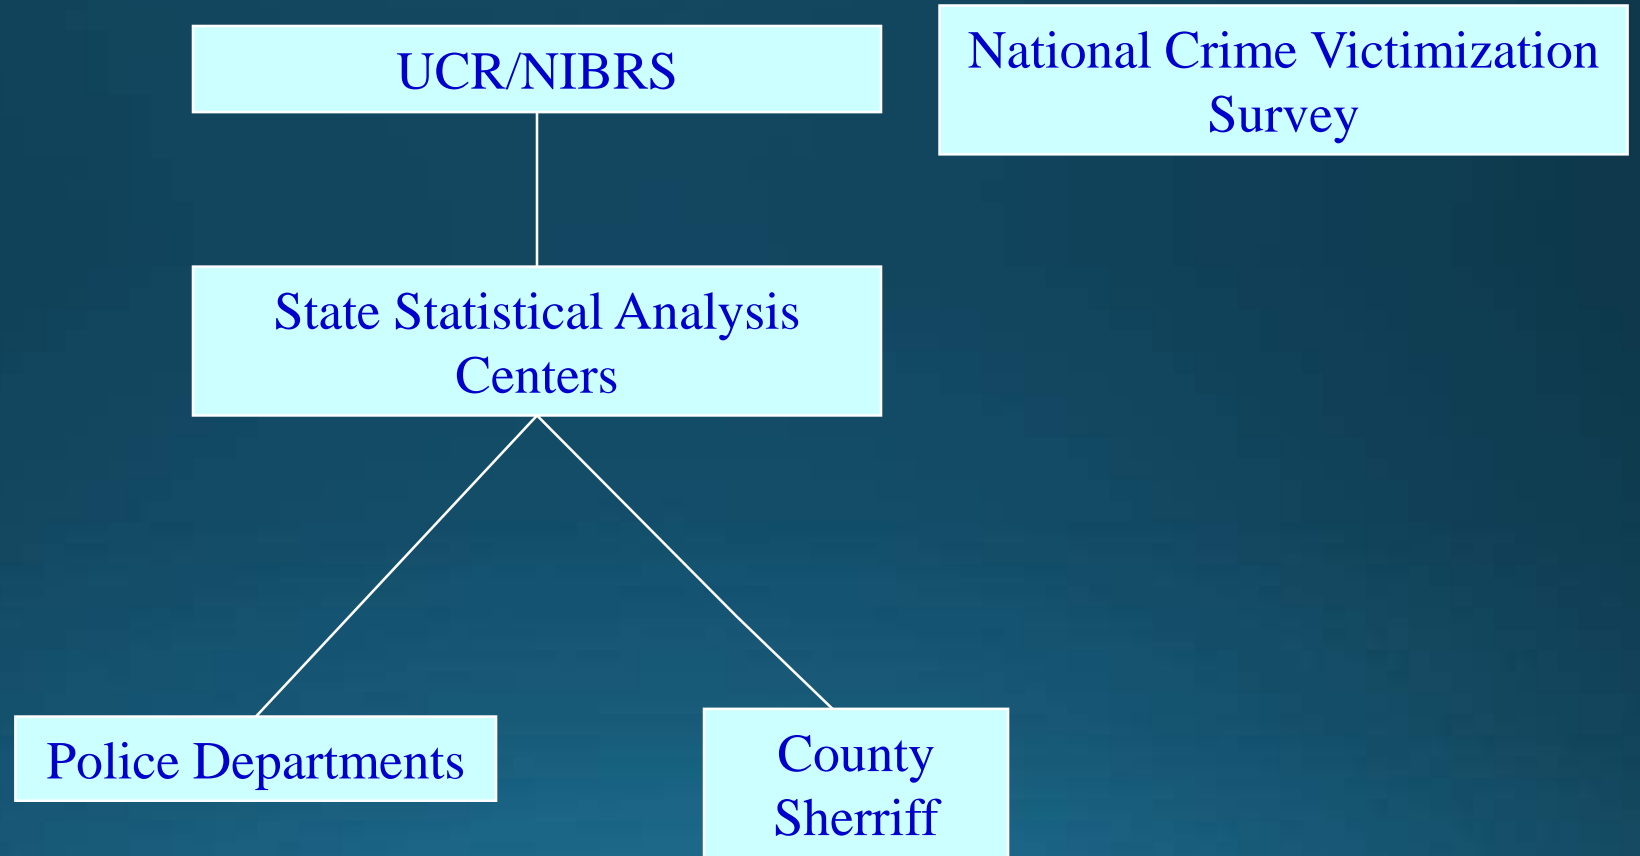

- NCIC—National Crime Information Center
- IAFIS—Integrated Automatic Fingerprint Identification System
- III—Interstate Identification Index
- NLETS—National Law Enforcement Telecommunications System
- HSIN—Homeland Security Information Network
- National Data Exchange

Statistical Reporting Layers

Federal

State

Local

Challenges in Crime Classification

- The legacy of the Uniform Crime Reporting system
- The basis of intervention—the penal code exclusion and limits
- The debate on ownership of crime categories
- The aversion to public disclosure
- Governance and the inclusion of all stakeholder interests
- The cost of modernization

Policy Implications

- Without the ability to disaggregate data, policy is not informed
- Crime classification based on statutes loses consistency as statutes change and prevents interdisciplinary research
- Crime classification should support research on intervention strategies and programs
- Measuring program effectiveness requires attribute analysis
- Crime can only be understood in a context

Crime classification must therefore be:

- Based on neutral definitions of events
- Designed in detail with meaningful and useful attributes
- Coherent in the context of other social systems and services
- Based on standard definitions and naming conventions
- Easy to change with the times
- Supportive of the full range of stakeholder needs

The Path to Better Decisions
